DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview David S. Carus on 04/23/2010.

Claim 1, (Currently Amended) A computing system for executing a plurality of software applications comprising:

- a) a processor;
- a b) an operating system having an operating system kernel having OS critical system elements (OSCSEs) for running in kernel mode using said processor; and,
- b c) a shared library having shared library critical system elements (SLCSEs) stored therein for use by the plurality of software applications in user mode and
- i) wherein some of the SLCSEs stored in the shared library are functional replicas of OSCSEs and are accessible to some of the plurality of software applications and when one of the SLCSEs is accessed by one or more of the plurality of software applications it forms a part of the one or more of the plurality of software applications, and

ii) wherein an instance of a an SLCSE provided to at least a first ~~one or more~~ of the plurality of software applications from the shared library is run in a context of said at least first ~~one or more~~ of the plurality of software applications without being shared with other of the plurality of software applications and where at least a second ~~one or more other~~ of the plurality of software applications running under the operating system have use of a unique instance of a corresponding critical system element for performing ~~essentially~~ same function, and

iii) wherein a SLCSE related to a predetermined function is provided to the first of the plurality of software applications for running a first instance of the SLCSE, and wherein a SLCSE for performing a same function is provided to the second of the plurality of software applications for running a second instance of the SLCSE simultaneously.

Claim 3, (Currently Amended) A computing system according to claim 1 wherein OSCSEs corresponding to and capable of performing ~~essentially~~ the same function as SLCSEs remain in the operating system kernel.

Claim 6, (Canceled)

Claim 9, (Currently Amended) A computing system according to claim 8 ~~claim 7~~ wherein the up call mechanism in operation, executes instructions from an SLCSE resident in user mode space, in kernel mode.

Claim 19, (Currently Amended) A computer system as defined in claim 2 wherein SLCSEs are not copies of OSCSEs ~~OSLCEs~~.

Claim 20, (Canceled)

Reasons for Allowance

Claims 1 – 5 and 7 – 19 are allowed.

The following is an Examiner's statement of reasons for allowance. None of Elnozahy et al. (hereinafter Elnozahy) (US 7,499,966 B2) and Wong et al. (hereinafter Wong) (US 2004/0216145 A1) on the record discloses "a shared library having shared library critical system elements (SLCSEs) stored therein for use by the plurality of software applications in user mode and

i) wherein some of the SLCSEs stored in the shared library are functional replicas of OSCSEs and are accessible to some of the plurality of software applications and when one of the SLCSEs is accessed by one or more of the plurality of software applications it forms a part of the one or more of the plurality of software applications, and

ii) wherein an instance of a SLCSE provided to at least a first of the plurality of software applications from the shared library is run in a context of said at least first of the plurality of software applications without being shared with other of the plurality of software applications and where at least a second of the plurality of software applications running under the operating system have use of

a unique instance of a corresponding critical system element for performing same function.

iii) wherein a SLCSE related to a predetermined function is provided to the first of the plurality of software applications for running a first instance of the SLCSE, and wherein a SLCSE for performing a same function is provided to the second of the plurality of software applications for running a second instance of the SLCSE simultaneously” (Claim 1). Instead, Elnozahy discloses kernel extension device driver that are user space extensions of operating system code to minimize kernel calls by web server and Wong discloses user mode accessible copies of kernel-mode memory to facilitate a device driver to execute in user-mode while the graphics engine remains in kernel mode.
